

not an ache in an acre.

If all the Polvonite® wrestling mats used by over 5000 schools and colleges were placed side by side, they would cover some 5,000,000 sq. ft. More than 114 acres of wrestling mat surface! The world's finest.

And not an ache in an acre. Here's why:

- Polvonite mats absorb up to 40% more shock than any other foam mats.

- there's no injury-causing bottoming or rebound.

- the exclusive PEC-10® coating provides firm, fast footing.

- the coating is non-abrasive to prevent mat burns.

Besides that, Polvonite mats are non-absorbent, easy to clean, lightweight (under .8 lb. per sq. ft.), non-ripping, and long wearing.

This is the original plastic-coated, all-foam mat for wrestling

and for gym use—developed by Protection Equipment in 1954—made in a factory built specifically for production of foam wrestling and gym mats.
